# SMRUTI RANJAN PRADHAN

**SOC ENGINEER • THREAT HUNTING • CYBER THREAT INTELLIGENCE • PENETRATION TESTING • SECURITY AUTOMATION**

Bhubaneswar, Odisha, India | +91 7978708584 | smrutiranjanpradhan.info@gmail.com

https://smrutiranjanpradhan.co.in | LinkedIn | GitHub | Medium | Substack

## PROFESSIONAL PROFILE

Cybersecurity professional with 3.8 years of experience spanning SOC engineering, hypothesis-driven threat hunting, cyber threat intelligence, vulnerability assessment, web application penetration testing, incident investigation, network monitoring and security automation. Implemented OpenCTI and MISP from scratch in a production SOC environment; experienced in ArcSight ESM/Logger, enterprise log-source onboarding, ESET EDR, MITRE ATT&CK-based investigations and security reporting. Develops practical workflows and tools that connect attacker behavior, operational telemetry and actionable security findings.

## CORE EXPERTISE

**SOC Engineering & Incident Response:** ArcSight ESM/Logger, SmartConnectors, SIEM monitoring, log integration, event triage, investigation, RCA, alert tuning, escalation, SOPs

**Threat Hunting & Detection:** Hypothesis-driven hunts, IOC/IOA correlation, MITRE ATT&CK, Windows/Linux, DNS, WAF, firewall, proxy, Apache, endpoint and network traffic analysis

**Cyber Threat Intelligence & Research:** OpenCTI, MISP, feed ingestion, IOC enrichment, malicious infrastructure validation, actor/TTP tracking, OSINT, technical research and reporting

**Penetration Testing & Vulnerability Management:** Web application VAPT, OWASP Top 10, XSS, SQLi, IDOR, broken access control, Nessus, Qualys, OpenVAS, HCL AppScan, Burp Suite, OWASP ZAP, Acunetix

**Automation, Observability & Infrastructure:** Python, PowerShell, Linux, Zabbix deployment, automated availability reporting, security dashboards, Windows/Linux server and networking fundamentals

**AI-assisted Security Research:** Use of AI/Codex to support controlled security workflow development, investigation drafting and validation; human-reviewed analysis and evidence handling

## PROFESSIONAL EXPERIENCE

**SOC Engineer | Cyber Identity Solution | Bhubaneswar | Feb 2026 – Present**

- Lead day-to-day SIEM/log engineering: integrate Windows/Linux servers, firewalls, WAFs, switches and additional security sources; investigate SmartConnector, parsing, routing and Logger visibility issues.
- Investigate escalated security events, correlate EDR, authentication, firewall, DNS, proxy, web and network telemetry, support RCA, containment recommendations, documentation and stakeholder updates.
- Lead production deployment of OpenCTI and MISP, manage feed and IOC workflows, evaluate SIEM consumption of intelligence and connect CTI findings with SOC investigations.
- Perform routine hypothesis-driven threat hunting, create queries on DNS bypass, suspicious outbound traffic, WAF behavior, web attacks, authentication anomalies and potential lateral movement.
- Conduct vulnerability assessment and web application testing, manually validate selected findings and communicate remediation actions.
- Develop executive-facing CISO SOC visibility dashboard and implement Zabbix network/node monitoring with automated monthly, quarterly and annual availability reporting.
- Guide junior analysts and create SOPs, troubleshooting notes and technical reports; automate repeatable security/data processing tasks using Python and PowerShell.

**Security Engineer | E Square System & Technologies Pvt. Ltd. | Bhubaneswar | Dec 2024 – Feb 2026**

- Monitored security and network events across endpoints, firewalls, IDS/IPS and applications; investigated unusual activity, correlated logs and supported incident response and remediation.
- Developed CTI- and telemetry-driven hunting hypotheses; investigated domains, IPs, URLs and exposed services using open-source intelligence and MITRE ATT&CK mapping.
- Performed authorized vulnerability assessments and penetration testing across web applications, infrastructure and services; documented exploitation conditions, risk and remediation priorities.

- Supported security hardening, patch validation, technical reporting and cross-team resolution of network and application security issues.

**Technical Support Engineer | Convisor Technology | Oct 2020 – Mar 2022**

- Supported Windows systems, networking, VPN/LAN/Wi-Fi, patching, connectivity troubleshooting, user access and service documentation; developed core infrastructure troubleshooting skills.

## SIGNATURE IMPLEMENTATIONS & OPERATIONAL ACHIEVEMENTS

**Production MISP + OpenCTI CTI pipeline** — Implemented both platforms, configured intelligence workflows and IOC enrichment, and connected resulting intelligence to SOC investigative use.

**CISO SOC Dashboard** — Created a consolidated executive-facing view of SOC metrics, incidents, security posture and operational trends.

**Zabbix Monitoring + Reporting Automation** — Deployed Zabbix to replace an expired paid monitoring platform and automated availability reports for monthly, quarterly and annual review.

**Hypothesis-Driven Hunt Program** — Built and presented recurring hunt logic across DNS, network, WAF, endpoint and authentication telemetry, documenting evidence and observations.

**Device and Log-Source Engineering** — Onboarded heterogeneous log sources and resolved connector-to-SIEM event delivery and visibility issues in production.

## SELECTED GITHUB PROJECTS & PUBLIC TECHNICAL WORK

Portfolio: github.com/jarvishdinocent | Project descriptions below refer to public code/research work; production implementations are described separately.

**Social Media IOC Collector to MISP** [GitHub] Social-platform-related indicator collection, validation and MISP integration workflow.

**MISP Automated Intelligence Pipeline** [GitHub] Multi-source CTI ingestion, normalization, deduplication and enrichment workflow.

**CERT-In Threat Intelligence to MISP** [GitHub] CERT-sourced threat indicator processing and MISP ingestion.

**AusCERT Feed Integration** [GitHub] Structured AusCERT intelligence intake into MISP.

**Japanese / Polish CERT Integrations** [GitHub] Cross-source threat feed normalization and enrichment.

**GitHub Threat Intelligence to MISP** [GitHub] Extracting actionable indicators from publicly accessible GitHub threat-intelligence sources.

**OpenCTI Learning & Knowledge Base** [GitHub] Documentation and educational content explaining OpenCTI workflows and CTI operations.

Additional repositories: aws-s3-to-misp • asset-lookup-tool • Asset-Dashboard • OpenSource-ThreatHunting • soc-bidir-threat-checker.

## RESEARCH, WRITING & METHODOLOGY

- Publish educational cybersecurity research and practical analysis on Medium and Substack, with focus on threat intelligence, SOC workflows, threat hunting and emerging attacker behavior.
- Developing ATLAS-X, an intelligence-led offensive security methodology connecting exposed assets, attacker relevance, validation, risk prioritization and defensive detection mapping (work in progress).
- Exploring AI-assisted/agent-based threat hunting and authorized pentesting workflows with explicit validation, human review and operational-data safeguards (experimental work).

## TOOLS, TECHNOLOGIES & FRAMEWORKS

ArcSight ESM / Logger / SmartConnectors; ESET EDR; OpenCTI; MISP; Zabbix; Windows and Linux; Syslog, DNS, firewall, WAF, proxy, IDS/IPS and network logs; Python; PowerShell; VirusTotal; Shodan; AbuseIPDB; AlienVault OTX; URLhaus; Maltego; Recon-ng; HCL AppScan; Nessus; Qualys; OpenVAS; Acunetix; Burp Suite; OWASP ZAP; MITRE ATT&CK; Cyber Kill Chain; OWASP Top 10.

## EDUCATION & CERTIFICATIONS

Bachelor of Technology | Centurion University | 2015–2019

CEH v13 • Microsoft Certified: Identity and Access Administrator Associate • RHCSA • CCNA Routing & Switching • MCSA Windows Server 2012 R2 • Ethical Hacking Expert • Diploma in Information Security
